

Hi there,

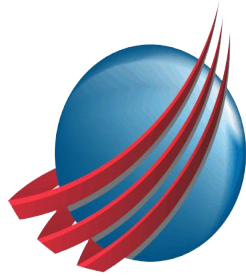

Thanks for showing your interest on us.

We will get back to you soon.

Let us first introduce
ourselves

Welcome to

InlandWorld Logistics

— *Imagine. Integrate. Impact.* —

A small brief about us....

Inland World Logistics (formerly, Inland Road Transport) is the flagship company and core strength of Inland Group. Committed to conducting business with excellence by way of improved technology and services, IWL has been consistently delivering efficient, end-to-end logistics solutions to customers, while maintaining business ethics and practices. Today, Inland World Logistics has over 550 offices/outlets, a fleet of vehicles and a nationwide network. Keeping with the tradition of providing good quality and timely service, IWL is poised to be the finest logistics company in India and a globally respected industry leader.

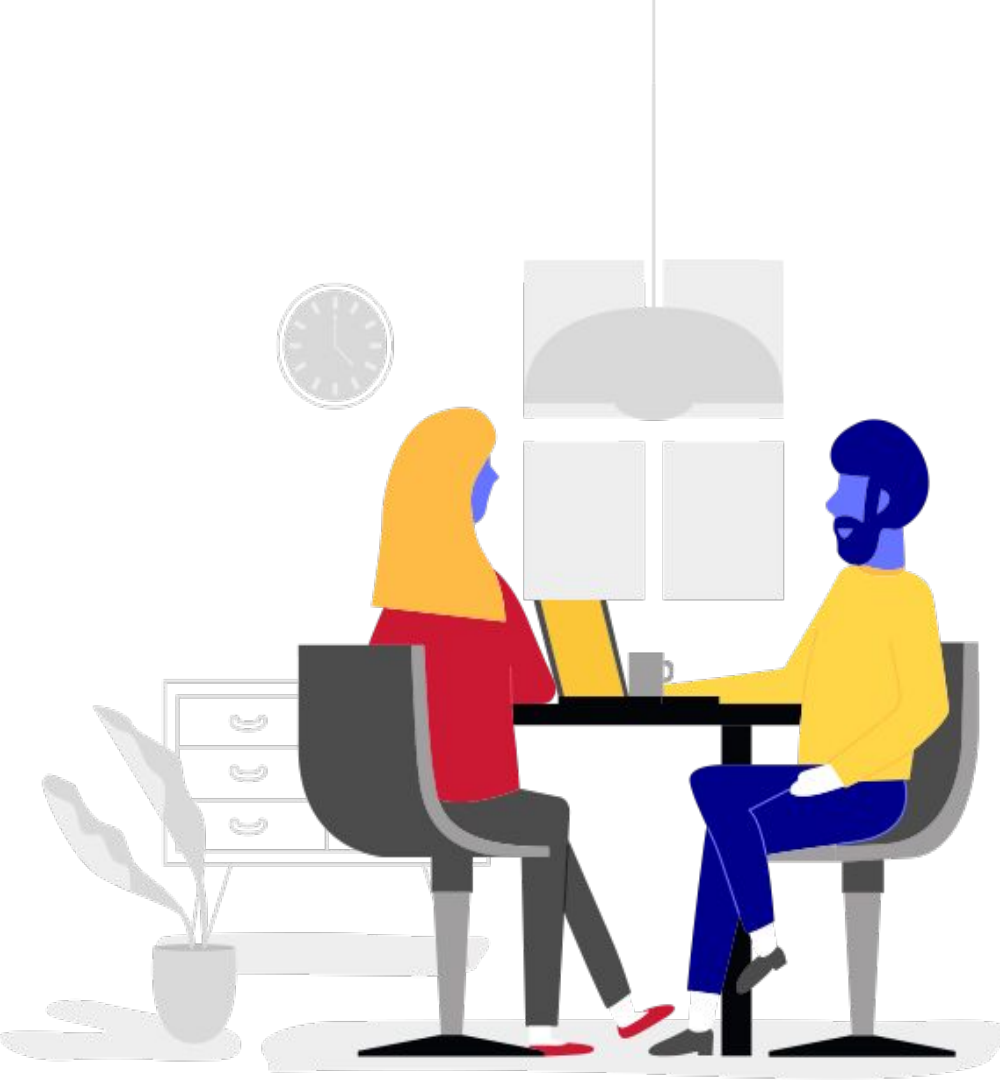

What we offer you...

- Transportation Service
- Warehousing Service
- Supply Chain Service
- 3PL Consultancy Service

Why we may become your choice . . .

- Pan India services with over 200+ branches across the country
- Established since 1979 (over 41 years of experience and expertise)
- Over 1.70 lakhs customers served each year
- Over 10000 truck trips engaged each month.

results

Here are the results which you expect from us....

- Growth of business from 30-1700% each year
- Increase Market Share by 15% - 300% year on year
- Reduce delivery times upto 60% across India
- Smooth and Hassle free door step services in multiple locations across India

So here in this document **we**
will tell you...

What are the top **25 Genius Tips** for **Saving Money** on your Shipping Costs?

Everyone wants to save money on shipping. No great secret there. At **Inland World Logistics**, we're committed to helping our customers, and their customers (and really anyone that's interested in shipping) save time and money on their logistics.

To that end, we've compiled a list of *25 Genius Tips for Saving Money on Your Shipping*. We've categorized them for easy digestion between the General Freight Industry, Less-Than-Truckload (LTL), and Full Truckload, but you'll find that most of our tips can be used in any form of shipping. So buckle up, call the kids in for dinner, and prepare to save some serious cash next time you ship.

1. Know Your Industry: *The world of shipping is big and bad, and you've got to know your enemy. Whether it's LTL, truckload, or parcel, you've got to know the details of your industry before you can master it.*

2. Reuse Your Packing Materials: *It's easy to save and reuse bubble wrap, packing peanuts, air pillows, and any other sort of packing materials you might get in your next online retail purchase.*

3. Don't Spend Money on Cardboard Boxes: *With a little effort and ingenuity, you can find these bad boys all sorts of places.*

4. Make Sure Your Freight is Ready Before Scheduling a Pickup: *Make sure your freight is ready to go, or else you might end up with a dry run fee, and that can cost you cash.*

5. Know the Difference Between "Value" and "Price": *The lowest price is not always the best value. Sometimes, paying more up front can avoid additional costs later on.*

6. Pay Attention to Your Invoices: *Don't assume your freight charges are always correct. Always review your invoices, and don't be afraid to take your questions and concerns to your broker or carrier.*

7. Don't Always Trust Freight Calculators: *LTL shipping quotes are about more than weight and shipping locations. Online freight calculators can give you a false idea about your freight quote, and that can cost you money in the long run.*

8. Know the Lingo: *Don't get confused by weird acronyms or definitions in the freight industry. The pages of a shipping dictionary are numerous, and can feel never ending.*

9. Inspect Your Shipment at Delivery: *Make sure to notate any damage on your delivery receipt. Even if it seems like a little thing, a scratch here or there, mark it on the POD (Proof of Delivery). Without notated damage, you won't be able to file a freight claim for any damage/loss, and this will cost you money.*

10. Cut Down on "Stated" Shipping Costs: *Nobody likes paying a ton for shipping (obviously). Adjust your prices to include some of those costs, and your customers will be more likely to buy.*

11. Shop Around on Volume Quotes: *Not all volume quotes are created equal. Some freight companies specialize in large markets, small markets, or particular geographic locations.*

12. Lighten Up: *Weight is a major component of pricing in shipping, so avoid heavy packing materials. Go with packing peanuts instead of wool blankets. Anything you can do to cut down on the total weight of your shipment is going to help you get a cheaper freight quote.*

13. Know Your Freight Class:*Another major factor in the price of a quote is the freight class. Getting the right one is key, or you may end up with a reclass. Given that freight class can be so confusing, it's important to get a handle on it early.*

14. Cut Out Delivery Appointments:*It can be tough, but carve out an afternoon to hang out at the house. By giving the freight carrier a large window to deliver your shipment, you can avoid paying extra for a delivery appointment.*

15. Get Third Party Insurance:*It might cost a little more up front, but if you're shipping expensive or fragile items it will make all the difference if something gets lost or damaged during transit. Most carriers have their own freight insurance, but it rarely covers the full cost of a damaged shipment.*

16. Consolidate Your Shipment:*Packaging items together can significantly cut down on shipping and packaging costs. By consolidating your shipment you can cut weight, density, and a chance of damage or loss.*

17. Pick Up Your Freight at the Terminal: *To avoid additional shipping fees like liftgates and residential deliveries, you can always go pick your shipment up from the delivering freight terminal.*

18. Determine if Your Shipment is LTL or Parcel: *If your shipment is small enough, you can save money using small package or parcel shipping instead of LTL.*

19. Use a Density Calculator: *With more and more freight classes being dependent on density, using a density calculator can help you avoid costly reclasses.*

20. Hire a Professional: *Freight brokers can get you better shipping quotes, not to mention they can help out with claims, damage, tracking, and so much more.*

21. Ship Early to Avoid the Holiday Crunch: *Avoid delays and expedited costs by shipping at least a week early around the holidays. Both LTL and truckload slow down as drivers and carriers take take off work for the holidays.*

22. Know How Much Room You Need: *Always know how many square feet of truck space you'll need. There is always the chance of "Partialling" a shipment to save money, but if you don't know exactly how much space your freight will take up then that won't be an option.*

23. Don't Forget About Intermodal: *If your freight is not time sensitive you can save some serious dough by utilizing the rail and shipping your stuff intermodal.*

24. Track Carrier Performance: *Just like volume quotes, not all freight carriers are created equal. Try different carriers and track their performance to make sure you're using the right carrier for your freight. Once you find one that you like and that treats you*

25. Take Advantage of Backhauls: *When you're shipping truckload, getting a carrier on a backhaul can save you serious cash. Once again, you'll need a broker with knowledge of the trucking markets to get you the best deal on backhauls.*

Thank You
